

AKBAR IQBNU PRAYOGA

+6289510109273 | akbariqbnup@gmail.com | linkedin.com/in/akbariqbnu

I am an individual with a strong interest in Front-End Development, Data Analysis, and Machine Learning. I am experienced in developing interactive and responsive user interfaces, analyzing data to generate useful insights, and exploring the application of machine learning models for database solutions. I am a fast learner, meticulous, and enthusiastic about new technologies and collaboration in cross-disciplinary teams.

Project

Education Training Website - **Project**

- An training platform designed to simplify participant access to schedules, certificates, and training sessions (both onsite and via Zoom).
- Implemented a fully responsive user interface using HTML, CSS, and Bootstrap for seamless access across devices.
- Developed automated email notifications for schedule reminders and registration confirmations.
- Integrating MySQL databases to efficiently manage participant, training, and certification data, and providing intuitive page navigation.

Mobile Phone Sales Website - **Project**

- A responsive e-commerce web application designed for selling mobile phones, focusing on delivering a smooth and engaging shopping experience.
- Developed the entire front-end interface using HTML, CSS, and JavaScript, featuring a clean and modern layout for easy navigation.
- Implemented an interactive product catalog with search, filter, and sorting features to help users find products quickly and efficiently.
- Designed a dynamic shopping cart system that allows users to add, remove, and update items in real time without reloading the page.
- Applied responsive web design principles, optimizing layouts for desktop, tablet, and mobile devices to ensure consistent usability across platforms.

Smart Dashboard Website - **Project**

- A responsive and interactive web application that integrates various personal utility features into a single, easy-to-use dashboard.
- Designed and developed a multi-functional dashboard that includes a user profile section, countdown timer, weather widget, social media shortcuts, music player, to-do list, and stopwatch.
- Built using HTML, CSS, Bootstrap, and JavaScript to ensure smooth interactivity and an attractive user interface.
- Implemented a modular component design, allowing each widget to operate independently while maintaining a consistent overall layout.
- Focused on user experience (UX) by implementing intuitive navigation, responsive layouts, and performance optimization for lightweight operation, while also integrating real-time data fetching for live weather updates.

Education

Universitas Tarumanagara - **Jakarta, Indonesia** Aug 2023 - Jul 2027 (Expected)

Bachelor of Computer Science

- Engaged in continuous learning and exploration of web development, system analysis, and emerging technologies such as artificial intelligence, data analytics, and cloud computing.
- Actively participate in seminars and webinars to improve skills in front-end development, data processing, and algorithm design through a combination of lectures and independent practice.
- Developing critical thinking, teamwork, and adaptability key skills for a fast evolving technology environment.

SMKS Bakti Mandiri - **Bekasi, Indonesia** May 2020 - Jun 2023

Multimedia

- Majored in Multimedia, focusing on design, visual communication, and basic web development.
- Actively participated in a student group for website design and simple coding projects.
- Gained practical experience in poster design, visual editing, and digital media production

Training And Course

Red Hat System Administration Aug 2024 - Nov 2024

- Learned the basics of navigating and managing the Linux environment.
- Practiced fundamental tasks such as opening directories, creating and managing files using the command line in Linux.
- Gained an understanding of the Linux file system structure and essential terminal commands.

Skills

- **Front End**: HTML, CSS, JavaScript, Bootstrap.
- **Data Analysis**: Python, Pandas, NumPy, Matplotlib, Scikit-learn.
- **Tools**: VS Code, GitHub, Jupyter Notebook, Google Colab.
